I claim:

1. A battery package comprising:

at least two separate modules, each module including a base having a first face and a second face, each module further including at least one pocket extending outwardly from the first face;

at least one battery placed into each pocket; and a cover placed over the at least two separate modules;

two of the at least two separate modules have the first faces thereof facing each other, with at least one pocket of a first one of the two of the at least two separate modules being located between a pair of pockets of a second one of the two of the at least two separate modules;

wherein the at least two separate modules will easily separate upon removal of the cover from over the at least two separate modules.

- 2. The battery package of claim 1, wherein:
 the at least two separate modules comprise at least three modules.
- 3. The battery package of claim 1, wherein: each module includes a lid over the second face of the base.
- 4. The battery package of claim 3, wherein: the lid is transparent.
- 5. The battery package of claim 3, wherein:

the base and the lid each include perforations between each of the pockets, whereby each pocket of each module can easily be separated from a remainder of the module by tearing the module along one of the perforations.

6. The battery package of claim 3, further including:
a card positioned over the lid and the second face of each module.

- 7. The battery package of claim 1, further including:a card positioned over the second face of each module.
- 8. The battery package of claim 1, wherein:
 each pocket includes a non-rotation feature for maintaining batteries in place therein in a selected rotated position.
- 9. The battery package of claim 8, wherein:
 the non-rotation feature comprises at least one tab extending into the pocket, the at least one tab being configured to frictionally engage the battery placed within the pocket.
- 10. The battery package of claim 1, wherein: each of the modules are identical.
- 11. The battery package of claim 1, wherein: each module includes four pockets.
- 12. The battery package of claim 1, wherein: each module includes five pockets.
- 13. The battery package of claim 1, wherein: every pocket on one of the at least two modules is identical.
- 14. The battery package of claim 13, wherein: every pocket is identical.
- 15. The battery package of claim 1, wherein: at least two of the pockets have different configurations.
- 16. The battery package of claim 1, wherein: at least two of the batteries have different configurations.

- 17. The battery package of claim 1, wherein: at least one pocket includes batteries having different configuration therein.
- 18. The battery package of claim 1, wherein:
 each pocket includes more than one battery therein.
- 19. The battery package of claim 1, wherein: each module includes perforations between each pocket.
- 20. The battery package of claim 1, wherein: each module includes the pockets in a single row.
- 21. The battery package of claim 1, wherein: the cover comprises shrink wrap plastic.
- 22. A method of packaging batteries comprising:

providing at least two separate modules, each module including a base having a first face and a second face, each module further including at least one pocket extending outwardly from the first face;

placing at least one battery in each pocket;

positioning the first face of at least two of the plurality of separate modules facing each other, with at least one pocket of a first one of the at least two of the at least two separate modules being located between a pair of pockets of a second one of the at least two of the at least two separate modules; and

placing a cover over the at least two separate modules.

- 23. The method of packaging batteries of claim 22, further including: placing a lid over the second face of the base of each module.
- 24. The method of packaging batteries of claim 23, wherein: the lid is transparent.

- 25. The method of packaging batteries of claim 23, further including:
 making perforations in the base and the lid between each of the pockets, whereby each
 pocket of each module can easily be separated from a remainder of the module by tearing the
 module along one of the perforations.
- 26. The method of packaging batteries of claim 23, further including: positioning a card over the lid and the second face of each module.
- 27. The method of packaging batteries of claim 22, further including: a card positioned over the second face of each module.
- 28. The method of packaging batteries of claim 22, further including: providing each pocket with a non-rotation feature; and maintaining batteries in place in the pockets in a selected rotated position.
- 29. The method of packaging batteries of claim 28, wherein:
 the non-rotation feature comprises at least one tab extending into the pocket, and further including frictionally engaging the battery placed within the pocket with the at least one tab.
- 30. The method of packaging batteries of claim 22, wherein: each of the modules are identical.
- 31. The method of packaging batteries of claim 22, wherein: each module includes four pockets.
- 32. The method of packaging batteries of claim 22, wherein: each module includes five pockets.
- 33. The method of packaging batteries of claim 22, wherein: every pocket on one of the at least two modules is identical.

- 34. The method of packaging batteries of claim 33, wherein: every pocket is identical.
- 35. The method of packaging batteries of claim 22, wherein: at least two of the pockets have different configurations.
- 36. The method of packaging batteries of claim 22, wherein: at least two of the batteries have different configurations.
- 37. The method of packaging batteries of claim 22, wherein: at least one pocket includes batteries having different configuration therein.
- 38. The method of packaging batteries of claim 22, wherein: each pocket includes more than one battery therein.
- 39. The method of packaging batteries of claim 22, further including: perforating each module between each pocket.
- 40. The method of packaging batteries of claim 22, wherein: each module includes the pockets in a single row.
- 41. The method of packaging batteries of claim 22, wherein:
 placing the cover comprises shrink wrapping plastic one of the at least two separate modules.
